Education

University of Alberta

Expected Completion: Dec 2026

Bachelor of Science in Computer Science, GPA: 3.5/4.0

Edmonton, AB

- **Academic focus:** Cybersecurity, network security, and secure systems
- **Relevant Courses:** Network Security, Cryptography, Software Engineering, Artificial Intelligence

Experience

Leader – OWASP

Jan 2026 – Present

OWASP Edmonton Chapter

Edmonton, AB

- Organized a Secure Coding Tournament for 50+ participants, partnering with Security Journey to deliver and guide participants through challenges involving identifying and patching vulnerabilities in intentionally flawed code.
- Managed all A/V logistics for the OWASP Edmonton & Accurate Networks presentation, resolving HDMI compatibility issues and audio feedback, and ensuring uninterrupted presentation flow.

VP Events – C.H.A.D.S.

Sep 2024 – Present

Cybersecurity, Hacking, And Digital Security club — University of Alberta

Edmonton, Alberta

- Co-hosted challenges across web, cryptography, binary exploitation, forensics, and OSINT for C.H.A.D.S.'s annual Capture-the-Flag competition, growing turnout to 200+ participants.
- Configured CTFd on Linode cloud servers and containerized 25+ custom challenges using Docker and Python, ensuring isolated, reproducible environments at competition scale.

Technology Specialist Co-op

May 2024 – Sep 2025

DiscoverE — University of Alberta

Edmonton, AB

- Provided technical support across 20+ classrooms and office environments, troubleshooting hardware, software, and AV issues on 20+ devices.
- Simplified an overengineered AppScript based employee sign-in/out system into a 10-formula Google Sheets solution, reducing complexity and maintenance overhead.
- Engineered a full-stack inventory management system pairing a Google Sheets backend with an HTML5 front-end, with an AppScript RBAC engine for cell-level permissions and row-verification logic reducing data concurrency errors.
- Identified a gap in the organization's data resilience and proactively implemented offline backups of company Google Drive data onto repurposed hardware.

Projects & Achievements

National Cybersecurity Consortium CTF | *Web Exploitation, LLM Prompt Injection*

Jun 2026

- Placed 2nd nationally among university teams from across Canada in NCC's Capture the Flag competition.
- Exploited a leaking API endpoint to extract password hashes, cracking them to escalate access and retrieve the flag.
- Bypassed LLM-based identity verification by crafting a prompt injection that convinced the model to accept a fabricated user ID, escalating to unauthorized higher-privilege access.

MacSync Stealer — Static Malware Analysis | *Zsh, Bash, AppleScript, Static Analysis*

Dec 2025

- Conducted static analysis of a ClickFix-style macOS infostealer campaign, decoding a base64-encoded, gzip-compressed multi-stage Zsh loader delivered via a disguised curl command.
- Identified stealth techniques including fileless execution and dynamic AppleScript-based C2 communication used for credential and browser-data theft.
- Traced exfiltration to a known IoC, confirming the sample as MacSync Stealer, and published a public write-up of the full attack chain.

JobPulse | *Python, Scrapy, PostgreSQL, OpenAI API, Node.js*

May 2026 – Present

- Built a Node.js web scraper using Axios and Cheerio to aggregate listings from 4+ job boards with a 98% success rate.
- Designed a deduplication system combining Levenshtein-based fuzzy matching with independent LLM scoring, averaging both signals to reduce duplicate listings by roughly 80%.
- Integrated OpenAI API to score listings against user profiles, returning relevance scores, surfacing better-fit roles.

Technical Skills

Languages: Python, Bash/Zsh, JavaScript, SQL, Google Apps Script

Security: Vulnerability Assessment, Static Malware Analysis, Web & Network Security, Prompt Injection/LLM Security

Web/Data: Node.js, Axios, Cheerio, PostgreSQL, HTML5, RESTful APIs, OpenAI API

Cloud/Infra: Google Workspace Admin/AppScript, Linode Cloud Servers, Docker Containerization
